

# Model LT-200-SCT Series Motorized Up/Down Lifts with Self-Concealing Top

Typical uses:  
 LT-200-SCT = 32" LCD/Plasma  
 LT-210-SCT = 42" LCD/Plasma  
 LT-220-SCT = 50" LCD/Plasma  
 LT-230-SCT = 60" LCD/Plasma

**General Sizing Information**

The self-concealing top option requires additional width, height, and overall cabinet depth to allow for proper rotation and clearance as the top pivots within the cabinet.

**WIDTH:** The overall lift width, dimension A1, must be at least 5.5" greater than the television width to accommodate side rails and necessary clearance.

**HEIGHT:** The overall height, dimension B, must be at least 9.5" greater than the television height to accommodate the lift platform and necessary clearance.

**DEPTH:** The lift platform is fabricated in a 9" depth. This depth must allow for the television depth + the television manufacturer's wall mount bracket depth + 1" for the LIFT-TECH Backplate. Inside cabinet depth in back of the lift platform should accommodate the following minimum dimensions:

- 4.75" (to accommodate the arc of the self-concealing top)
- + the thickness of the cabinet top
- + .25" clearance between the top and the inner wall of the cabinet.

**ALL MEASUREMENTS IN INCHES**

Model	A	A1	B	C	D	E	F	G	Travel	Max Load
LT-200-SCT	32.5"	34.5"	25.75"	9"	30"	30.75"	4.75"	3"	21"	100 Lbs.

### Typical Self-Concealing Top Motorization

### The LIFT-TECH Self-Concealing Cabinet Top

Traditionally, the cabinet top had not been an issue, given that lift cabinets always contained an "inner box" to house the television. With the introduction of plasma televisions, the rules have changed. Consumers prefer to highlight the thin profile of their stylish televisions for a more high-tech look. LIFT-TECH's self-concealing cabinet top provides an elegant solution to fulfill this need. At the touch of a button, the top is concealed and the television is raised. A backplate is provided to interface with a wall mount bracket.
